## Application Design and Testing

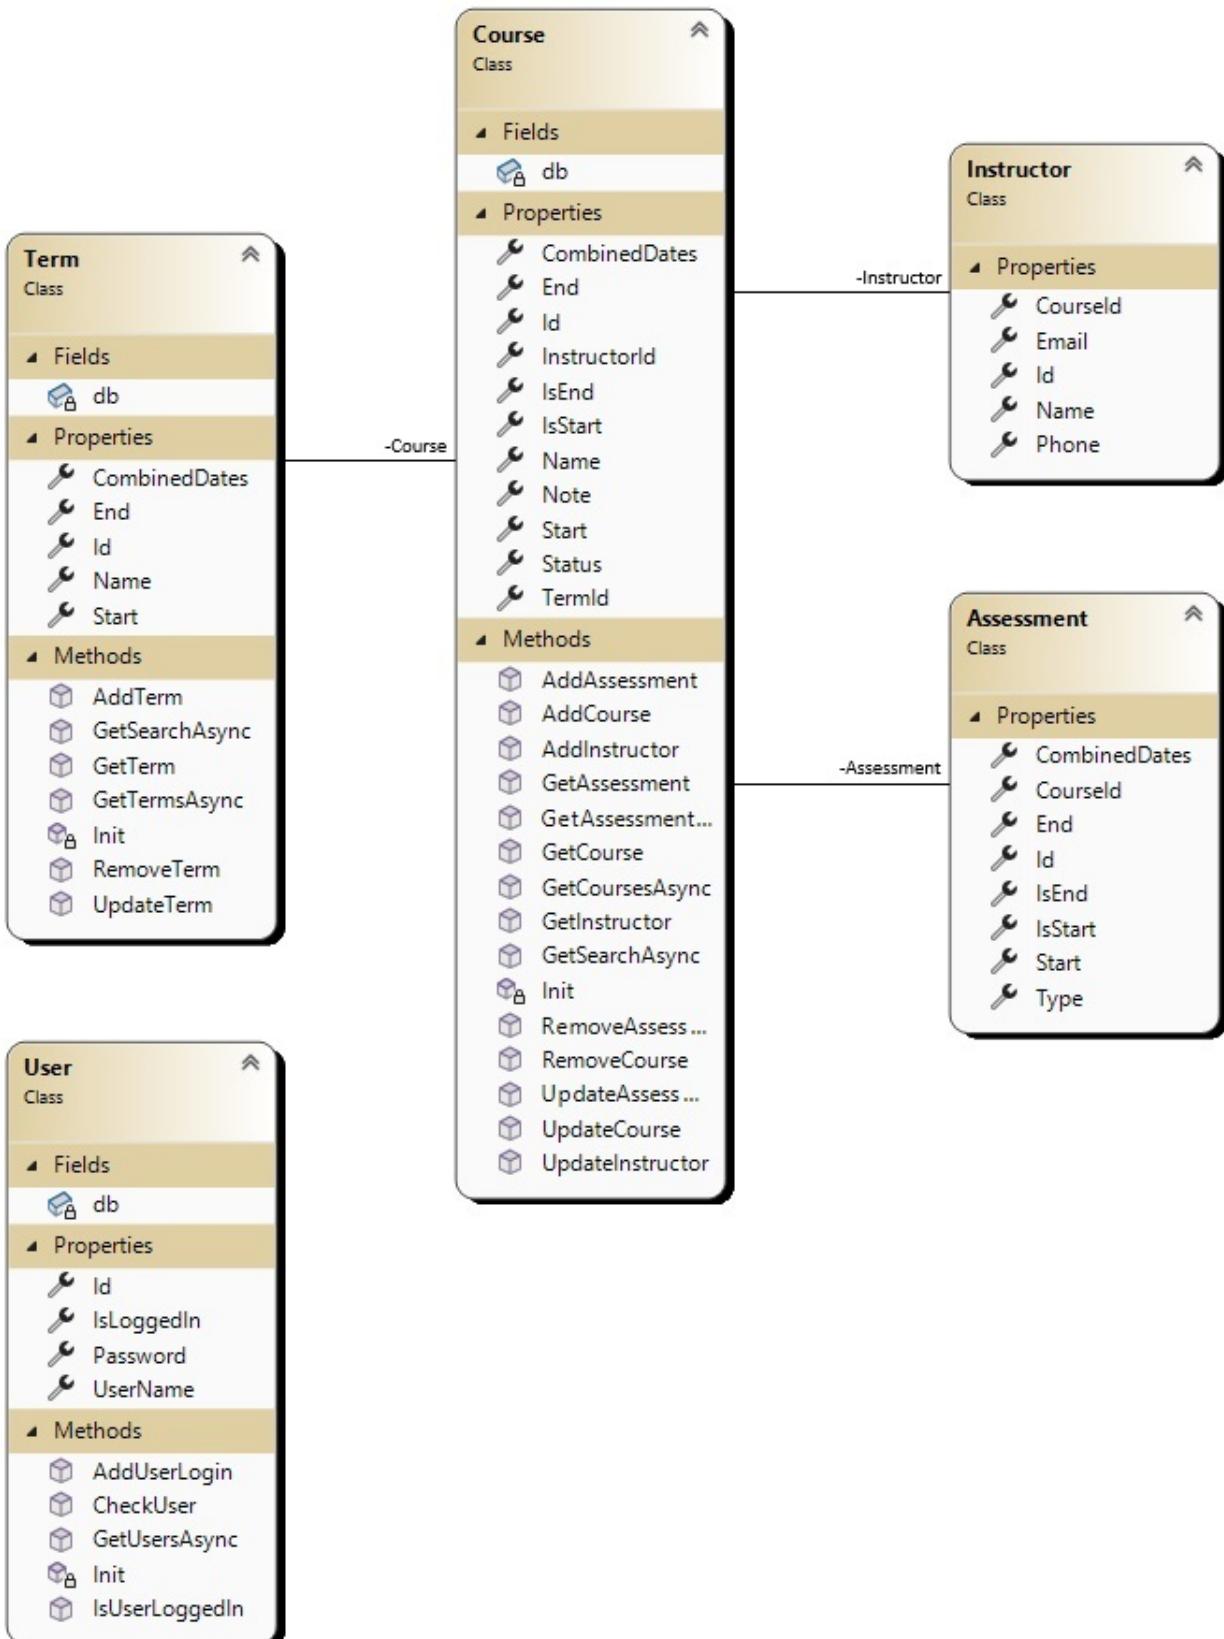

### Class Design

A diagram of the components of the School Term Tracker mobile application is provided.

The mobile application is a tool for students to track their terms, courses, and assessments and the ability to generate reports. The main classes are as follows:

- Term – The Term class contains all courses related to the term. The class contains methods to add, update, delete, and view terms. Additionally, there is a method to retrieve all terms.
- Course – The Course class contains all courses related to the parent term. A term can contain multiple courses. In addition to adding, updating, and deleting course information, students need to add the course's instructor information as well. Optionally, students can add assessments to courses.
- Instructor – The Instructor class contains information for the course instructor. Instructors can be related to multiple courses.
- Assessment – The Assessment class is related to a course. Each course contains a maximum of two assessments: a Performance Assessment and an Objective Assessment. Students can add, update, and delete assessments.
- User – The User class contains the login information for the student accessing the mobile application. The class contains a method to create a user login if the application does not have any user records, a method to check the validity of the

login information, a method to get user records, and a method to check if the user is currently logged in.

## UI Design

The User Interface (UI) for the School Term Track is simple and intuitive so students can focus on their studies. The design starts with a user login screen to securely access the application. Once the user has logged in, users are taken to a screen with a list of terms.

The main feature of the application is for users to add, update, delete, and view their terms, courses, and assessments. Additionally, users can opt to enable notifications for start and end dates for courses and assessments. Users can also generate a report to view a summary of all their courses for a term.

Login

The screenshot shows a mobile application interface. At the top, there are two status bars: the left one shows 2:28 and the right one shows 2:30. Below the status bars is a header with 'All Terms' on the left and a back arrow with 'View Term' on the right. A search bar with 'Enter search' placeholder text is positioned below the header. The main content area is divided into two sections: 'Terms' on the left and 'Courses' on the right. The 'Terms' section contains a single item: 'Term 1' (02/20/2025 - 02/20/2025) with a 'View' button. The 'Courses' section contains one item: 'Test Course' (02/22/2025 - 02/22/2025) with a 'View' button. Below the 'Courses' section is a search bar with 'Enter search' placeholder text. At the bottom of the screen is a blue button labeled 'Generate Report'.

Generate Report

The image displays two side-by-side screenshots of a mobile application interface, likely from an Android device, showing a course management screen.

**Screenshot 1: View Course**

At the top, there are two status bars, each showing the time (2:31), signal strength, and battery level. The main screen has a dark blue header with a back arrow and the text "View Course".

**Course Details:**

- Test Course**
- 02/22/2025 - 02/22/2025
- Status: In Progress

**Test Course Instructor:**

- Test Instructor
- test.instructor@test.com
- 1235554321

**Notes:**

Test note

**Share icon:** A circular icon with three dots connected by lines, representing a sharing or linking function.

**Screenshot 2: View Report**

At the top, there are two status bars, each showing the time (2:31), signal strength, and battery level. The main screen has a dark blue header with a back arrow and the text "View Report".

**Report Summary:**

Name	Start and End	Status
Test Course	02/22/2025 - 02/22/2025	In Progress

**Assessments:**

**Performance Assessment**  
02/22/2025 - 02/22/2025  

**Objective Assessment**  
02/22/2025 - 02/22/2025  

**Buttons:**

- Edit** (blue button)
- Delete** (blue button)

**Bottom Navigation Bar:** A thick black bar with white horizontal lines in the center, likely a navigation bar for the application.

## Unit Test Plan

### Introduction

#### Purpose

Throughout the development process, it's important to conduct unit tests to ensure the codebase runs smoothly and without issues. The testing method used is to test individual components and ensure the functionality works as intended. This will verify the mobile application performs as expected. For this unit test, we will be testing user authentication.

#### Overview

User Authentication – The login functionality was tested to ensure that authorized users could access the application. The test involved using valid and invalid credentials to check if the application returns the appropriate response. Valid credentials would take users to the term list screen and invalid credentials would display an error message.

### Test Plan

#### Items

- Development Environment: Unit tests will be conducted in Visual Studio 2022. A new project will be created in the same solution for unit tests.
- Test Framework: The testing framework used will be xUnit, which works with .NET MAUI.

#### Features

- User Authentication – Test user login.

## Deliverables

- Test scripts – A new project will be created in the same solution to hold the test scripts in the codebase.
- Test results – A report with the results of the test scripts, which includes successful and failed tests.

## Tasks

- Create a new project in the same solution and use the xUnit framework.
- Write the test scripts for user authentication including adding new user login information, successful authentication, and failed authentication.
- Execute the test scripts.
- Analyze the test results and identify any unexpected results.

## Needs

- Software – Visual Studio 2022 needs to be used and xUnit NuGet packages need to be installed.
- Project – Within the solution, create a new xUnit test project for unit testing. Ensure the project references the mobile application project.
- Test scripts – Access the test scripts to run the unit tests.

## Pass/Fail Criteria

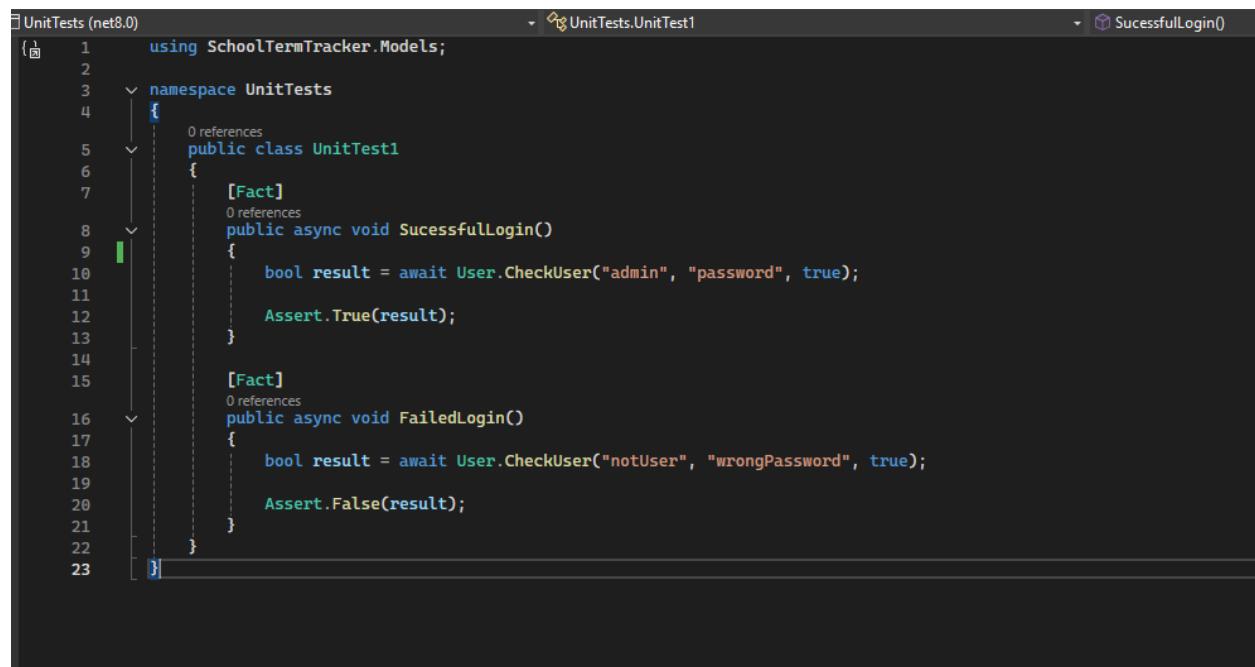

- User Authentication
  - Pass: User login email and password is authenticated and valid.
  - Fail: User login email and password is not authenticated and invalid due to incorrect login information.

If a test failed during the process, the following remediation strategies and documentation requirements were used to address the issue:

- Investigate the failed test to identify the root cause of the issue. This includes examining the output log, error messages, and any other relevant information.
- Document the issue in a bug report or ticket. This will include relevant details such as the test that failed, any error messages, steps to reproduce, and any other relevant details.

## Specifications

Below are examples of the test scripts and codes.

```
UnitTests (net8.0)
1  using SchoolTermTracker.Models;
2
3  namespace UnitTests
4  {
5      public class UnitTest1
6      {
7          [Fact]
8          public async void SucessfulLogin()
9          {
10             bool result = await User.CheckUser("admin", "password", true);
11
12             Assert.True(result);
13         }
14
15         [Fact]
16         public async void FailedLogin()
17         {
18             bool result = await User.CheckUser("notUser", "wrongPassword", true);
19
20             Assert.False(result);
21         }
22     }
23 }
```

## Procedures

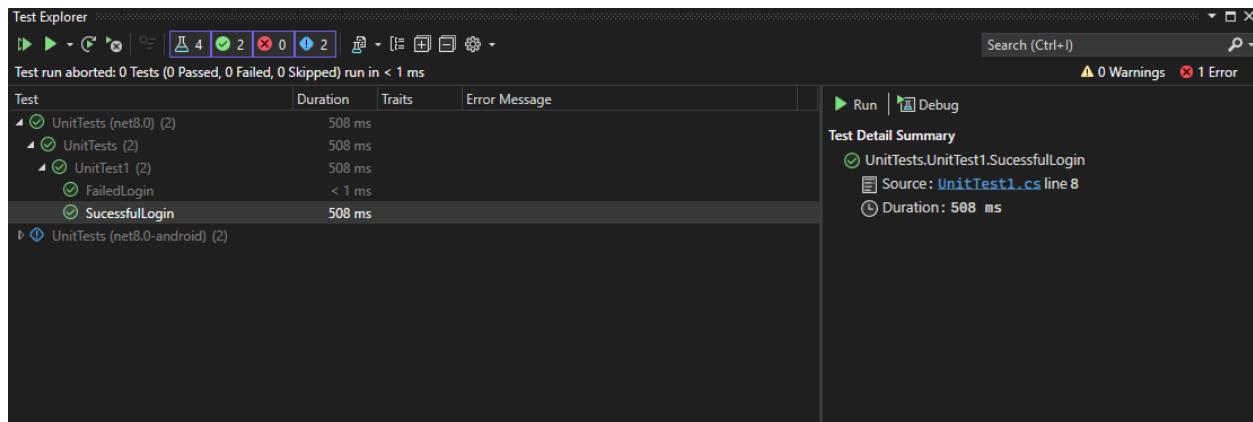

- Determined the functionality of the mobile application that will be tested. Wrote the test cases and defined expected outcomes for each of the test cases.

- Added a new test project to the solution and referenced the project to be tested in the test dependencies.
- Executed the test case using the test runner. If the test cases fail, refine the test cases and code as needed and re-run the test.
- Document the test results, identify any issues and any updates to the code or test cases.

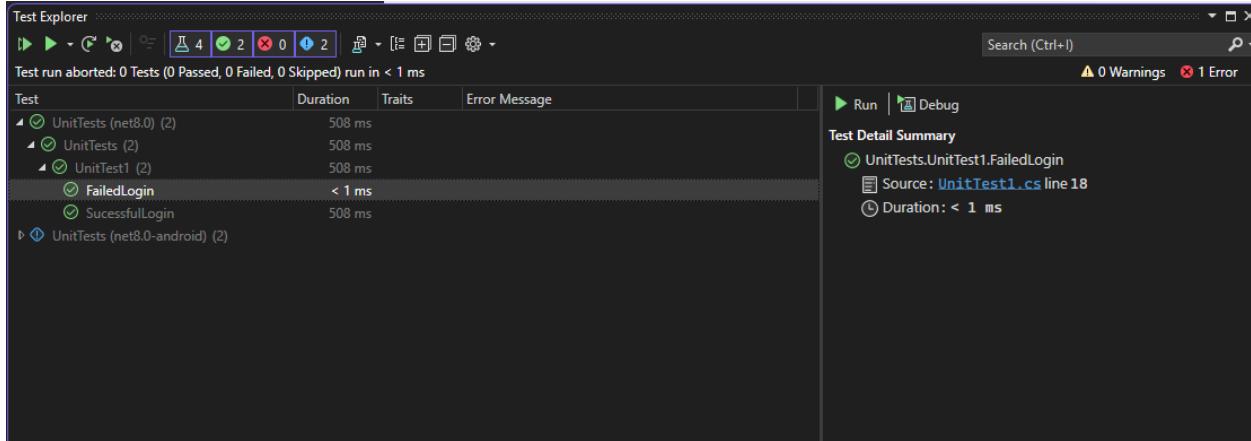

## Results

All the tests passed. The results screenshots are as follows.

## User Guide

### Introduction

This User Guide provides an overview of the initial setup and steps to get the application up and running for maintenance.

## Installing the Application

- Ensure Git is installed in your system. Instructions are provided here: <https://git-scm.com/book/en/v2/Getting-Started-Installing-Git>
- Access the GitLab repository
  - Switch the branch to “working” from “main”
  - Click on the “Code” button and copy the URL under “Clone with HTTPS”
- Open Visual Studio 2022
  - Click “Clone a repository”
  - Paste the URL into the “Repository location” field
  - Confirm the path to the project and click “Clone”
- Build the application and ensure there are no build errors

## School Term Tracker User Guide

This User Guide for the School Term Tracker mobile application is an overview of the mobile application’s functionality and features from a user perspective.

### User Login

When starting the application, users will use the provided username and password to log into the application. Enter the username and password and click login.
